

ON-SITE WASTE SLURRY HOLDING BINS

KEY FEATURES:

- Bins have 15m³ holding capacity
- Bins have sealed lockable lids
- Platform for operators to assist with discharge and cleaning processes
- Bins are specially designed for easy positioning and removal by hook truck
- Small footprint on-site
- Quick and easy set up on-site

1800 PATRIOT
patriotgroup.com.au

Patriot Environmental Management is fully equipped and able to supply on-site Non Destructive Digging (NDD) Waste Slurry Holding Bins. Our innovative service design allows projects to improve productivity, utilisation, downtime and reduce overall waste transportation costs.

During NDD operations vacuum trucks discharge their NDD waste into the holding bin. The vacuum truck simply backs up to holding bin, connect and discharge all waste directly into the storage unit. Patriot's storage bins are specially designed for ease of use, improved operational efficiency and to safely and efficiently store a range of waste materials.

When NDD waste holding bin is at capacity, Patriot utilises large semi tankers (20,000L capacity) to empty the waste holding bin and transport it to an approved waste facility. This allows the NDD vacuum trucks to remain on site and continue operations, increasing efficiency.

BENEFITS:

- Reduce transport costs
- Improves vacuum truck utilisation on site
- Eliminates numerous truck movements off site to a waste disposal facility
- Eliminates downtime and costs of trucks in transit to and from waste disposal facility
- Eliminates un-necessary queuing and waiting to discharge at the waste disposal facility
- During night shift, eliminates the need and high costs of having the waste disposal facility remaining open after-hours
- Maximises hourly and daily NDD productivity on site
- Eliminates digging of on-site storage ponds
