Patriot Environmental Management has vast experience in cleaning storm water, sewer pipes, culverts, gullies and drains. Our Recycler Combination Unit provides water jetting and vacuum recovery for drain, sewer, culvert and industrial cleaning.

The Recycler Combination Unit is able to remove a range of materials and waste debris from sewers and drains, including oily waste, dirty ballast, sludge, sewage, tree roots, debris, sediment, grease, silt and sludge.

We compliment this service with Closed Circuit Television (CCTV) for pipe and culvert inspections, evaluations and reporting. The use of CCTV enables us to monitor the condition of sewer and stormwater pipes for blockages and deterioration, or even for researching infiltration and inflow. Utilising the latest technology, a clear picture can be produced to enable clients to assess ongoing maintenance.

We have experienced, accredited operators for all industrial cleaning, sewer, drain and culvert clearing and cleaning purposes, including:

- Cleaning sewer pipes, stormwater drains and culverts
- Drain cleaning of silt, debris and fats
- Flood recovery works
- Clearing of blockages and root removal
- Transportation and waste disposal
- CCTV surveys to assess the condition of pipes
- Man hole cleaning
- Reservoir and pump station cleaning
- Gross pollutant trap cleaning
- Tank, well and vessel cleaning
